

Allowing the installation on Windows

Bicho ScoreBoard PRO does not have a Microsoft digital signature yet, so Windows may ask you to confirm before installing. It is safe and takes a few seconds. Follow the case that happens to you.

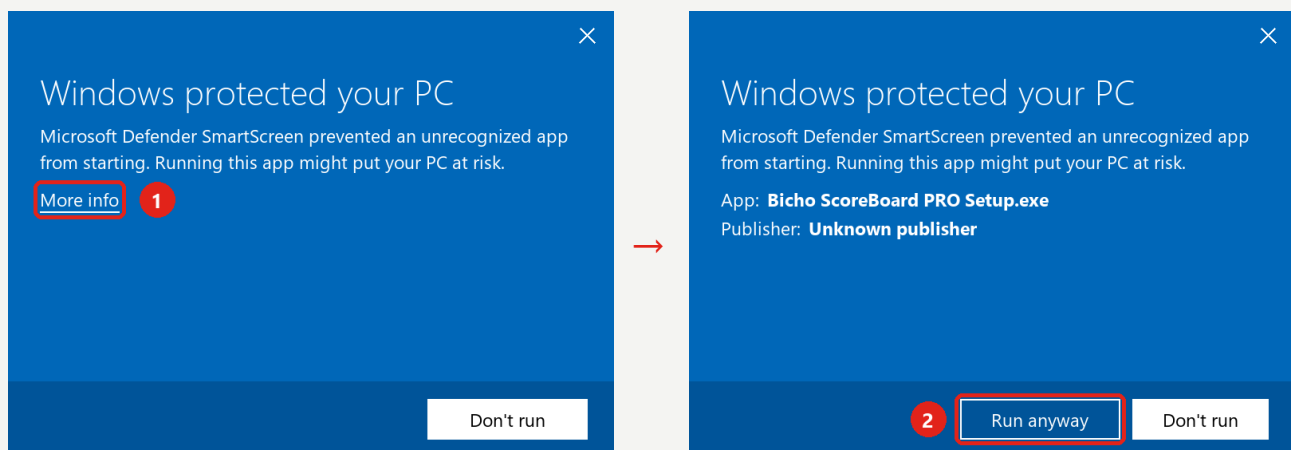

1 Did you get the installer via WhatsApp, e-mail or Google Drive?

Before opening it: right-click the file → **Properties** → check **Unblock** → **OK**. If the option isn't there, the file is already allowed.

2 Did a blue “Windows protected your PC” screen appear?

Click **More info** and then **Run anyway**. You only need to do this once.

3 You double-click and nothing happens, with no warning?

That is Windows 11 **Smart App Control**. **Talk to us before changing it**: according to Microsoft, once it is turned off it can only be turned back on by reinstalling Windows. Path: Windows Security → App & browser control → Smart App Control settings → Off.

You don't need to turn off your antivirus or SmartScreen. Names may vary slightly depending on your Windows version. Illustrations of the Windows screens.
